Disabling AGC (Automatic Gain Control) in Zoom

AGC is handy for a voice call as it levels the volume of all the speakers. However, it wreaks havoc with music as it tends to map pp up to mf, and ff down to mf. AGC wipes out the dynamics.

The default Zoom settings place AGC on. Here's how to turn it off:

Starting at the login screen, click on your initials in the upper right hand corner. The red arrow points to where you'll click:

This brings you to this next screen. Click on Settings:

Which brings you to this screen:

Now click Audio:

General Video Audio Audio Output Level: Share Screen Volume: Volume: Virtual Background Recording Profile Statistics Statistics Keyboard Shortcuts Accessibility Output I under the method built of	tti	ngs	-				
Video Speaker Test Speaker Speakers (High Definition Audio Audio Output Level: Output Level: Share Screen Volume: Image: Constraint of the state of)	General

			Mute my mic	Mute my microphone when joining a meeting			
Press and noid SPACE key to temporarily unmute yourself			🕗 Press and hold SPACE key to temporarily unmute yourself				
Sync buttons on headset			🕑 Sync buttons on headset				
						Advanced	

And click on Automatically adjust volume. That will turn off the both the blue check box and the AGC, as shown in the next picture:

Settings				
 General Vídeo 	Speaker Test Speaker Speakers (Logitech US8 Headset) v			
∩ Audio	Output Level:			
Share Screen	Volume: 4			
Chat

	Mute my microphone when joining a meeting			
	Press and hold SPACE key to temporarily unmute yourself			
	Sync buttons on headset			
	Advanced			

That's all you need to do. Now, you could go farther and disable the background noise cancelling, as these might also do funny things. Click the advanced button in the above screen to bring up the screen shown below:

C Sett	ings			×		
Θ	General	< Back				
0	Video	Show in-masting aption to "Enable Original Cound" fi	com microphono			
	Audio	Show in-meeting option to "Enable Original Sound" from microphone Audio Processing Restore Defaults				
•	Share Screen	Suppress Persistent Background Noise ⑦	Auto			
0	Chat		Auto			
	Virtual Background					
0	Recording	Echo cancellation	Auto			
8	Profile					
	Statistics					
0	Accessibility					
	Accessionity					

Click both suppress persistent background noise and suppress intermittent background noise (they say Auto above), and choose the drop-down item that says "disabled", as shown below:

You will have to adjust the volume control and/or the distance to the microphone to get the volume capture into a good range for the computer, but the AGC action should be disabled, and you'll be able to hear the loudness difference as you crescendo or diminuendo.
